

Marion Tumbled Products

Marion is the only manufacturer offering both tumbled thin brick and tumbled thin pavers.

Environmentally Friendly Products

Marion's tumbled products are environmentally friendly in several ways.

- We fire with natural gas, the cleanest fuel available.
- Our clay bodies contain approximately 20% recycled materials.
- Our Tumbled Vee Brick weigh 8 pounds per square foot versus 27 pounds per square foot for full bed depth face brick which reduces our per square foot fuel consumption by 70%.

Old Brickyard Collection

A product line within a product line.

Our Old Brickyard Collection has been developed to be a basic offering of Tumbled Vee Brick for brickyards and masonry products dealers and distributors across America. This eight color product line reflects a small portion of the possibilities available from our offering of seventeen colors, six standard blends and unlimited custom blends. We have chosen five of our most popular standard colors including our unique most recent additions, 710 Seashell and Bisque, and added our three best selling blends. Please note our Bisque has a very pleasing notable texture which is especially suited for painting and glazing. All of Marion's tumbled products are two sided which gives users flexibility in design.

As part of our process, 20% of the faces of our Tumbled Vee Brick will have cross hack marks (some of which will be very subtle). Users have the opportunity to seek or avoid this flashing effect.

Our Tumbled Vee Brick product line is produced by tumbling 15/16" square edge Vee Brick after kiln firing. Tumbling achieves the rounded distressed look of used brick.

*Please note our Tumbled Vee Brick product line includes matching face brick and corners. Our tumbled corners are sawed from tumbled face brick.
